

# Plants for Winter Interest

Over the years our customers have asked many questions regarding the selection, suitability, growing conditions and care of trees and shrubs. To help answer these questions we have put together a series of leaflets in excess of 28 categories, which we hope will help.

## ABC SELECTION

Plants, shrubs and trees in the Garden Centre, are laid out in alphabetical order to help with selection. Please do ask a member of staff if you are unable to find exactly what you are looking for. We can also take your order, if we are waiting for a delivery and then notify you when it's in stock. Popular seasonal plants under the covered areas are not displayed alphabetically.

## Plants for Winter Interest

SHRUB NAME	SUGGESTED VARIETIES
Aucuba	japonica
Berberis	some
Callicarpa	bodinieri
Chaenomele	many
Chimonanthus	praecox
Cornus	many
Corylus	avellana
Cotoneaster	many
Daphne	all varieties
Elaeagnus	variegated forms
Euonymus	japonica
Fatsia	japonica
Garrya	eliptica
Gaultheria	many
Hamamelis	all varieties
Ilex	female and self-fertile varieties
Leucothoe	many
Lonicera	fragrantissima, purpusii
Mahonia	many
Nandina	domestica
Phormium	all varieties
Pyracantha	all varieties
Sarcococca	humilis, confusa
Skimmia	many
Viburnum	bodnantense, fragrans, tinus, davidii

## CLIMBING PLANTS

Clematis (some)    Hedera (Ivy)    Jasminium nudiflorum

## PERENNIALS

Ajuga                      Bergenia                      Helleborus                      Pulmonaria

## PLANTING

All plants need some 'tender love and care' and preparation of the soil will encourage good growth. Prepare the ground by digging in tree and shrub compost, farmyard manure or well rotted garden compost. This will help retain moisture in dry periods, open up heavy land and bind light soil. Make a hole at a depth to suit the root system and cover in. Apply about 2oz of Bone Meal or Fish Blood and Bone around the plant and mix in to the soil, compressing it around the plant and water well. Heeling in will ensure water is retained around the plant and does not run away. A top dressing of Bark, approximately 3" depth, will finish the job off nicely and greatly reduce the need for future weeding.

## YOUR SOIL

Some plants require different growing conditions and may not thrive in your garden's particular soil type. This can easily be adjusted. Firstly, take a simple pH reading; this will indicate whether your soil is acid or alkaline. pH meters are available in the Garden Centre from £2.99 to £17.99. Once you have a reading you can easily adjust your soil's pH level by adding lime or ericaceous products. Please ask a member of staff if you need help.

## A USEFUL TIP

Look around your neighbourhood to see what plants grow successfully locally.

## IRRIGATION

Micro-irrigation is a very efficient method of watering. The system works automatically, mostly at night, to maximise moisture retention without water loss through evaporation.

## TREE PLANTING

Trees need the same planting and feeding care as shrubs, but in addition will need support. The Garden Centre stocks a range of stakes and tree ties which will offer support in the early stages of growth. (Remember to check ties at regular intervals as the tree grows to avoid damage to the bark).
