

Shrubs for Containers

Over the years our customers have asked many questions regarding the selection, suitability, growing conditions and care of trees and shrubs. To help answer these questions we have put together a series of leaflets in excess of 28 categories, which we hope will help.

ABC SELECTION

Plants, shrubs and trees in the Garden Centre, are laid out in alphabetical order to help with selection. Please do ask a member of staff if you are unable to find exactly what you are looking for. We can also take your order, if we are waiting for a delivery and then notify you when it's in stock. Popular seasonal plants under the covered areas are not displayed alphabetically.

Shrubs for Containers

SHRUB NAME	SUGGESTED VARIETIES
Acer	palmatum varieties
Azalea	all varieties
Buxus	topiary shapes
Camellia	all varieties
Convolvulus	cneorum
Cordyline	australis
Daphne	mezereum
Fatsia	japonica
Fuchsia	all varieties
Hebe	all varieties
Hibiscus	many
Hydrangea	many
Ilex	aquifolium
Laurus	nobilis
Lavandula	all varieties
Myrtus	communis
Phormium	Bronze Baby, Flamingo
Pieris	all varieties
Pittosporum	all varieties
Rhododendron	all varieties
Rose	many
Santolina	all varieties
Skimmia	all varieties
Spiraea	all varieties
Standards	Euonymus, Salix, Rose, Malus, Cotoneaster
Trachycarpus	fortunei
Viburnum	tinus
Yucca	all varieties

PLANTING

All plants need some 'tender love and care' and preparation of the soil will encourage good growth. Prepare the ground by digging in tree and shrub compost, farmyard manure or well rotted garden compost. This will help retain moisture in dry periods, open up heavy land and bind light soil. Make a hole at a depth to suit the root system and cover in. Apply about 2oz of Bone Meal or Fish Blood and Bone around the plant and mix in to the soil, compressing it around the plant and water well. Heeling in will ensure water is retained around the plant and does not run away. A top dressing of Bark, approximately 3" depth, will finish the job off nicely and greatly reduce the need for future weeding.

YOUR SOIL

Some plants require different growing conditions and may not thrive in your garden's particular soil type. This can easily be adjusted. Firstly, take a simple pH reading; this will indicate whether your soil is acid or alkaline. pH meters are available in the Garden Centre from £2.99 to £17.99. Once you have a reading you can easily adjust your soil's pH level by adding lime or ericaceous products. Please ask a member of staff if you need help.

A USEFUL TIP

Look around your neighbourhood to see what plants grow successfully locally.

IRRIGATION

Micro-irrigation is a very efficient method of watering. The system works automatically, mostly at night, to maximise moisture retention without water loss through evaporation.

TREE PLANTING

Trees need the same planting and feeding care as shrubs, but in addition will need support. The Garden Centre stocks a range of stakes and tree ties which will offer support in the early stages of growth. (Remember to check ties at regular intervals as the tree grows to avoid damage to the bark).
