

Plants for North Wall

Over the years our customers have asked many questions regarding the selection, suitability, growing conditions and care of trees and shrubs. To help answer these questions we have put together a series of leaflets in excess of 28 categories, which we hope will help.

ABC SELECTION

Plants, shrubs and trees in the Garden Centre, are laid out in alphabetical order to help with selection. Please do ask a member of staff if you are unable to find exactly what you are looking for. We can also take your order, if we are waiting for a delivery and then notify you when it's in stock. Popular seasonal plants under the covered areas are not displayed alphabetically.

Plants for a North Wall

SHRUB NAME	SUGGESTED VARIETIES
Azara	microphylla
Camellia	many
Chaenomeles	many
Choisya	ternata
Cotoneaster	horizontalis, lacteus
Fatsia	japonica
Garrya	eliptica
Hedera	all varieties
Hydrangea	all varieties
Mahonia	many
Osmanthus	many
Pachysandra	terminalis
Pyracantha	many
Rose	many
Vinca	all varieties

CLIMBING PLANTS

Akebia	Celastrus	Clematis alpina
Clematis cirrhosa	Hedera	Hydrangea petiolaris
Lonicera	Parthenocissus	Roses (some)

PERENNIALS

Alchemilla	Anemone	Aruncus
Bergenia	Brunnera	Campanula
Cimicifuga	Convallaria	Dicentra
Digitalis	Ferns	Geranium
Helleborus	Heuchera	Hosta
Polygonatum	Prunella	Pulmonaria
Rodgersia	Tiarella	Tricyrtis

PLANTING

All plants need some 'tender love and care' and preparation of the soil will encourage good growth. Prepare the ground by digging in tree and shrub compost, farmyard manure or well rotted garden compost. This will help retain moisture in dry periods, open up heavy land and bind light soil. Make a hole at a depth to suit the root system and cover in. Apply about 2oz of Bone Meal or Fish Blood and Bone around the plant and mix in to the soil, compressing it around the plant and water well. Heeling in will ensure water is retained around the plant and does not run away. A top dressing of Bark, approximately 3" depth, will finish the job off nicely and greatly reduce the need for future weeding.

YOUR SOIL

Some plants require different growing conditions and may not thrive in your garden's particular soil type. This can easily be adjusted. Firstly, take a simple pH reading; this will indicate whether your soil is acid or alkaline. pH meters are available in the Garden Centre from £2.99 to £17.99. Once you have a reading you can easily adjust your soil's pH level by adding lime or ericaceous products. Please ask a member of staff if you need help.

A USEFUL TIP

Look around your neighbourhood to see what plants grow successfully locally.

IRRIGATION

Micro-irrigation is a very efficient method of watering. The system works automatically, mostly at night, to maximise moisture retention without water loss through evaporation.

TREE PLANTING

Trees need the same planting and feeding care as shrubs, but in addition will need support. The Garden Centre stocks a range of stakes and tree ties which will offer support in the early stages of growth. (Remember to check ties at regular intervals as the tree grows to avoid damage to the bark).
